

Public Comments from Paul Taylor

The applied sciences that enable and protect your everyday activities are about repeatable, measurable proof of a theory for *cause and effect* concerning physical phenomenon using the *scientific method*. Policymakers must resist environmentalism's seduction of short-term political gains, and await the conclusive science that properly analyses air quality issues. Short-term leverage of environmental alarmism for political expediency will only hasten and lengthen a global economic collapse, with far greater human suffering, conflict and pollution than any of the worst-case scenarios being proliferated by environmentalism's 21st-Century climate crusade.

I commend to you the life-time investigations and scholarly reporting in our courageous colleague Epidemiologist Dr. James Enstrom, B.S., M.S., Ph.D., University of California at Los Angeles Professor (Retired) and Scientific Integrity Institute Founder October 2019 CASAC Comments excerpted as follows:

"In summary, the 2019 PM PA provides no evidence that supports changing the PM2.5 NAAQS. To the contrary, the evidence I have presented in the four sections above support the need to reassess the entire scientific basis for the PM2.5 NAAQS. Since the 2011 PM PA went through three drafts in September 2009, March 2010, and June 2010 before being finalized in April 2011, CASAC should recommend that a similar process be followed for the 2019 PM PA. All criticism of the September 2019 PM PA by the CASAC members and the CASAC consultants, as well as the criticism by me and others, must be addressed in the second draft of the 2019 PM PA."
