

**EPA-OAR EXCEL spreadsheet providing individual watershed values for deposition, fish mercury and exposure**

EPA's Office of Air and Radiation has provided an EXCEL spread sheet in response to a request for from a member of the SAB Mercury Review Panel for individual watershed values for some of the "the data developed for the mercury risk analysis," specifically "deposition, fish mercury and exposure."

The EXCEL spread sheet is available on the EPA docket at the address below:

Link: <http://www.regulations.gov/#!documentDetail;D=EPA-HQ-OAR-2009-0234-3074>

The NOTES sheet of that file describes the content in the other sheets. This file includes watershed-level Hg deposition data, fish tissue MeHg levels and the individual risk calculations for each watershed. The sheet is configured for the high-end female consumers scenarios (reflect both the watersheds where they might fish and their specific fish ingestion rates). The spreadsheet can be reconfigured for other populations modeled in the risk assessment (this process is described in the NOTES sheet).
