Subject: Natural Gas Fracking in PA

360,000 frack stages X 500,000 gallons of fracking fluid with little or no EPA regulation at a minimum = DISASTER. This will be a disaster of water contamination on a scale that will destroy the water supply for the TRi-state areas of PA, NJ, and NY and NYC. Methane is already leaking into the Delaware River. You can and should put a stop to this obscene use of one natural resource at the expense of millions of people. Your job is to protect the environment. If terrorist were to threaten the water supply; would you stand by and say the Gas Industry is exempt from the Clean Air and Clean Water Act? Do something Sensible and Brave!,
